## ESCONET TECHNOLOGIES' HEXADATA SERVER MODELS RECEIVE RED HAT HARDWARE CERTIFICATION

- Certification to strengthen HexaData's position as a trusted, compliant, and enterprise-ready server OEM
- Red Hat-certified hardware a mandatory/preferred requirement for data centers, mission-critical workloads, and long-term IT deployments in India

**New Delhi, December 18, 2025:**

**Esconet Technologies Limited**, a leading homegrown integrated IT solutions company, today said that its HexaData server model - HD-RS2200 has been awarded the '**certified status**' by **Red Hat**. The Red Hat certification is expected to significantly enhance HexaData's visibility in enterprise and PSU procurement searches, drive future inquiries, and accelerate order conversions by meeting a core compliance requirement for large institutional buyers across India.

Building on this success, the company has initiated certification and validation activities for additional operating systems and enterprise platforms, further expanding customer choice and deployment flexibility.

This certification is particularly critical for Enterprises, Government departments, and Public Sector Undertakings (PSUs) in India, where Red Hat-certified hardware is a mandatory or preferred requirement for data centers, mission-critical workloads, and long-term IT deployments. Red Hat certification ensures proven interoperability, adherence to global best practices, predictable lifecycle management, and trusted enterprise support—all of which are key decision factors for PSU and regulated enterprise procurements.

Commenting on the development, **Mr. Santosh Agrawal, Managing Director, Esconet Technologies**, said, *"This certificate from Red Hat is testament to the hard work and dedicated efforts of HexaData's Hardware Certification and Engineering teams, whose rigorous validation and testing processes have ensured full compliance with Red Hat standards. At Esconet, we continuously strive to provide cutting-edge solutions to companies across sectors to enable them to stay ahead in the ever-evolving technology landscape. We have already initiated certification and validation activities for additional operating systems and enterprise platforms so as to be able to further expand customer choice and deployment flexibility."*

New Delhi-headquartered Esconet Technologies manufactures high-performance supercomputers, data servers and workstations, besides providing a comprehensive range of IT solutions to SMEs, large organizations, and public sector clients, including data storage, networks, security, virtualization, and data protection. Recognizing the burgeoning demand in the Indian market, Esconet introduced its brand, HexaData, specializing in high-end Servers, Workstations, and storage systems through the Make in India initiative. Furthermore, Esconet's strategic collaboration with NVIDIA has propelled remarkable growth in the AI and ML domain, enhancing their servers and workstations.
