Sub.: Submission of transcript of Post results / Earnings Conference call held for H2 & FY 2025-26 pursuant to Reg 30 of SEBI (Listing Obligations and Disclosure Requirements) Regulations, 2015

Dear Sir / Madam,

Pursuant to Regulation 30 read with Para A of Part A of Schedule III SEBI (Listing Obligation and Disclosure Requirements) Regulations, 2015, please find enclosed herewith the Transcripts of the Post results / Earnings Call for H2 & FY 2025-26 held on Tuesday, May 19, 2026 at 12:00 PM IST.

We request you to kindly take the above information on record.

Thanking you,

Yours faithfully

H2 & FY26 POST EARNINGS CONFERENCE CALL

May 19, 2026 12:00 PM IST

Management Team

Mr. Mudit Aggarwal - Managing Director
Mr. Subhash Raghav – Chief Financial Officer
Mr. Arti Chauhan- Company Secretary

Call Coordinator

Strategy & Investor Relations Consulting

Presentation

Vinay Pandit: Ladies and gentlemen, on behalf of Kaptify Consulting Investor Relations Team, I welcome you all to the H2 and FY26 Post-Earnings Conference Call of Jay Bee Laminations Limited. Today on the call from the management team we have with us Mr. Mudit Aggarwal, Managing Director, Mr. Subhash Raghav, Chief Financial Officer and Ms. Arti Chauhan, Company Secretary.

As a disclaimer, I would like to inform all of you that this call may contain forward-looking statements which may involve risk and uncertainties. Also, a reminder that this call is being recorded.

I would now request the management to brief us about the business and performance highlights for the period ended March 2026, their growth perspective and vision for the coming year, post which we will open the floor for Q&A. Over to you, Mudit.

Mudit Aggarwal: Am I audible?

Vinay Pandit: Yes.

Mudit Aggarwal: Good afternoon, everyone. Thank you for taking out time to join this call today. My name is Mudit Aggarwal. I am the Managing Director at Jay Bee Laminations Limited. And on behalf of the company, I am pleased to discuss the performance of the company in FY26.

While the entire year remained more challenging than anticipated, we laid the foundation for multiple long-term growth drivers for the company. We strongly believe in the long-term growth story of the Indian power sector and aim to capitalize on this growth in the most sustained manner. We firmly believe our integrated approach of manufacturing CRGO cores and transformers combined with turnkey projects in the power and transmission and distribution sector will help us scale efficiently, organically and profitably in the long run.

Some financial highlights of the year were as follows. Total annual revenue stood at INR329 crores in second half of the year and INR 549 crores for the whole year, representing nearly 50% growth both sequentially and on a full-year basis. A meaningful 25% of the total revenue share came from the EPC projects business, contributing to INR141.5 crores revenue. EBITDA however, declined to INR34 crores in FY26 compared to INR43 crores in FY25 due to a decline in H1 of FY26 which was at INR10 crores. However, it jumped back to INR23.9

crores in H2, increasing from INR10.2 crores in H1, FY26 and INR20.1 crores in H2 FY25 with a sizable chunk coming from the EPC projects division.

Consequently, profit after tax also decreased to INR18.2 crores in the current year from INR25.4 crores from the previous year while it increased on a half-year sequential basis from INR3.68 crores in H1 FY26. The annual decline in profits resulted mainly from continued volatility in the CRGO business. Excessive imports from China caused multiple sharp declines in raw material prices, creating an oversupply in the market and difficulties in planning. Raw material prices fell by a staggering 30% to 35% from March 2025 to March 2026, causing extreme volatility in the supply chain.

Given the largely non-differentiated nature of the CRGO steel processing business, the entire industry faced pressure during the whole year, including supplier steel mills such as JSW and NLMK. For us, this eventually led to a decrease in gross margins and an increase in fixed costs as a percentage of sales, which continued into H2, thereby creating a two-fold challenge for the business. While we achieved 25% growth in volume, revenue from CRGO processing increased by only 10% in the whole year. This, however, reduced the working capital requirement within the segment in H2.

Further, we were able to reduce inventory levels and receivables in the CRGO business that freed up working capital and helped us scale and convert sales faster in the EPC business in the last quarter. In total, the company generated a cash flow from operations of INR30.1 crores as compared to a negative INR33.87 crores in the previous year due to a prudent capital allocation approach. The overall receivables increased to INR190 crores in the year versus INR78 crores in FY25, resulting from a spike in EPC sales in the last two months of the financial year. In Q3, we reported a revenue of INR15 crores and in Q4, we did a substantial revenue of INR126 crores.

The increased receivables were primarily funded through a modest increase in debt along with the substantial support from our vendors and creditors. Overall, our cash conversion cycle went down to less than 70 days in FY26 compared to 116 days in FY25, despite entering and rapidly scaling a new business line. That being said, we also acknowledge the importance of timely execution and disciplined receivables collection in the project's business. We are confident of completing the work on time while ensuring the receivables are normalized in the next 3, 4 months. While EBITDA margins within this

division hover around 12%, we expect margins for the remainder of the orders to be between 8% to 10%, going forward discounting short-term war-related supply disruptions and material cost increases. We expect revenue booking of about INR100 crores in the existing orders in FY27 and the remaining amount in FY28.

We are also actively pursuing business development in this space to fuel growth for FY27 and beyond. Given our existing resources and execution bandwidth, we believe we are positioned to handle additional orders of up to INR500 crores alongside our current order book. We are fairly confident that margins are expected to go up as we book new orders. However, we will remain highly selective in undertaking projects after carefully evaluating execution and receivables risk, as this business segment is still revolving for us and requires a cautious balance between execution and scale-up.

Transformer manufacturing is evolving steadily wherein we have successfully delivered our first transformers at customer sites without any reported issues. Annual sales of transformers and allied components were approximately INR6 crores, which included transformers, core coil assemblies, tanks and individual coils. Our approach is collaborative rather than competitive with existing customers. We intend to supply transformers and allied components to our existing customers while also tapping underserved markets within the transformer space. We are targeting INR20 crores to INR30 crores in sales from this division in FY27, supported by developmental or export orders in hand and encouraging momentum in the domestic market.

While this business may take some time to gain meaningful traction, we believe that it has potential to become a significant growth driver in the coming years, considering the high-demand scenario coupled with our experience and network in the transformer value chain. While we are excited about our new divisions, we are equally looking forward to scaling our CRGO business. With an installed capacity of close to 24,000 metric tonnes per annum, we are currently operating at a monthly capacity utilization of about 65%, with the most hope for ramping up in power transformer cores.

Amid the prevailing oversupply situation, the scale-up is taking longer than anticipated as we are now becoming even more selective in order booking. With the recently secured NABL testing lab certification and PGCIL 765kv class and NTPC vendor approvals, we anticipate increased order visibility and strengthened customer ties in the power transformer core sales. Our export sales contributed to a little less than

10% of the total CRGO sales and we expect it to increase marginally in this year.

Overall, our objective for FY27 is to maintain a similar volume growth trajectory while focusing on margin improvement. We have completed all the CapEx-related activities in manufacturing as planned and on time in the last two fiscal years, amounting to about INR30 crores, which has the peak potential of manufacturing sales of INR500 crores to INR600 crores at the prevailing price levels and INR700 crores to INR800 crores if CRGO prices bounce back to previous levels. We do not have major capacity expansion plans in FY27 as our focus will be on improving utilization across capacities.

We aspire to grow by keeping return on capital attractive for our shareholders. At a broader level, our strategy will revolve around two key principles, first being to evolve into an integrated player in the power T&D sector, contributing substantially to the development of India's electricity infrastructure. And the second would be to allocate capital most efficiently to ensure healthy ROC and ROE metrics that align with investor expectations.

With that, I am happy to answer questions that you may all have. Thank you.

Moderator: Thank you, Mudit. [Operator Instructions] We'll take the first question from Agastya. Agastya, you can go ahead, please.

Agastya Dave: Thank you Vinay bhai. Mr. Aggarwal, congratulations. Seems like a decent set of numbers. I missed around first three, four minutes of your opening commentary. So, I apologize if this has been addressed already. Sir, do you expect the CRGO margins to continue to decline further or have we hit the bottom in the second half?

Mudit Aggarwal: So, I'll answer this in a way which where I also answered the last time around. Again, I believe that the prices have bottomed out similar to the last time. The last time around, the prices were not going back up. But this time, we are seeing that the prices are going back up. One contributing factor is the extreme depreciation of rupee against dollar because we still are an import-dependent country as far as CRGO steel is concerned. However, Chinese internal demand is also seemingly strong, which is what gives us a signal that the prices are going to increase, probably not drastically, but maybe there will be some sort of stability going forward.

- Agastya Dave:** So, what kind of levels do you expect these to settle at? Again, sir, I understand a lot of variables, a lot of moving parts, but just your best estimate as of now.
- Mudit Aggarwal:** So, our best guess is a slight increase, say to the extent of 5% to 7%, not considering the depreciation of rupee. Because depreciation of rupee as of today has contributed to a 5% increase itself. So, that put together if rupee depreciation continues to say level of 100, 105, then it might even go up to 10% to 15% increase.
- Agastya Dave:** Perfect. Last question from my side. If I look at the EPC business now, I don't have the balance sheet breakup in front of me for that division itself. I have the capital deployed numbers that you have shared in the segmental breakups. But can you give us the working capital deployed in that business so far? And where do you expect this requirement to peak out? So, if I look at the trade receivables of almost INR200 crores, so let's say INR190 crores. And then you have inventories of INR47 crores. So, what is the bifurcation here between the two divisions?
- And similarly, on the payable side, so if I remove the MSME part, so INR122 crores of receivables, again, what is the bifurcation? And how do you see this division in terms of revenue growth also and also the working capital? How do you, I mean, what are the levels, number of days, let's say that you expect to see next year in terms of working capital requirements?
- Mudit Aggarwal:** So, out of the trade receivables of INR190 crores, our receivables in the EPC business is to the tune of INR118 crores.
- Agastya Dave:** 1-1-8?
- Mudit Aggarwal:** Yeah, 1-1-8. As far as inventories are concerned, there is negligible inventory on the books in the EPC business. It is to the tune of manufacturing business. With respect to payables, I'm so sorry, I'm not sure of the exact number, but I believe it is around INR70 crores to INR80 crores within EPC.
- Agastya Dave:** Okay. Okay. Okay. So INR118 crores and INR70 crores, INR80 crores. So, okay. So not that much actually. Do you expect these numbers to hold or do you expect like industry level numbers going forward?
- Mudit Aggarwal:** See, that entirely depends on the kind of order book that we have. So if you just consider the current order book, we will be able to reduce it quite drastically in the coming few months because the erection portion

will gain speed. So right now what has happened is it is mostly purchase of material and sold it to the end customer. So it is sort of like, I mean, I would advise you to take it with a pinch of salt as far as sales is concerned because erection has merely started. So the main situation that will unfold with respect to the execution part is once we complete a good amount of erection. Once we complete a good amount of erection, we will be able to encash about 30% 40% of the receivables.

Agastya Dave:

And in terms of growth, so you are giving order booking of INR267 crores. So based on this, how much growth are you expecting in the EPC business plus whatever visibility you have in terms of fresh tenders?

Mudit Aggarwal:

So in FY27, like I said, we are aiming to do about INR100 crores within the existing order book. So just to clarify, the order book that was initially received has slightly increased to the extent of INR180 crores because of a change in BOQ and some price variation factors. So essentially, what we are seeing is that we will be able to do INR100 crores within FY27 and INR35 crores to INR40 crores in FY28 with respect to the current orders.

With respect to new orders, we have some discussions in pipeline. Essentially, the whole issue here is that we don't have a pre-qualification to directly bid in tenders, which we are gaining at this point of time. And once we are able to gain that, we will be able to participate in the new tenders. It also depends on the speed of the decision of the tenders. We are interested in doing more of RDSS work, which we currently are also doing.

Agastya Dave:

Understood. Thank you very much for giving me your time. Sir, one small request. If you can move to quarterly reporting, that would be of great help. All the best, sir. Thank you very much.

Mudit Aggarwal:

Thank you.

Moderator:

Thank you. We will take next question from Shubh J.

Shubh J:

Sir, congratulations on a good set of numbers. I have, sir, just 2, 3 questions. Sir, the first question is that now that the business has sort of revived and H2 was really good. Sir, what sort of growth can we look at in FY27, especially if I talk about specifically all three verticals, transformers, EPC and your core CRGO business?

Mudit Aggarwal:

So, with respect to the CRGO business, again, we are aiming for the same amount of increase as we did last year in terms of volumes. We can't really say about the revenue, which is why I've never guided on revenue part because we know that the CRGO prices can be volatile. It may increase, it may decrease, which might not be the true picture as far as growth is concerned, which is why we would again like to say that volume growth should come. Since we have already secured 765 kV class approval in PGCIL, we have some order visibility, which might result in the additional increase in volumes.

On the transformer front, like I've said, it is going to be a slow increase. It will be an organic increase however, and the export orders that we already have in hand, that is to the tune of about INR1 crore. So, once that is developed and supplied to the customer, they will be even more confident to give us more orders. So, we have a verbal commitment from the customers to the tune of about INR20 crores as of now with respect to these export orders.

With respect to domestic transformer sales, we will continue to supply and support our existing customers for core coil assemblies, for tanks, for individual coils, as well as for transformers if and when required. We are in discussion with some of the customers. They would be willing to use our capacities to further enhance their sales as transformer industry is going through increased demand.

With respect to the EPC business, like I said, we are aiming for INR100 crores of revenue from the existing orders and our balance sheet tells us that we can take up to INR500 crores of order booking. If we are able to convert an order booking of INR500 crores or let's say even conservatively INR200 crores by the mid of the year, we will again be able to execute at least half of that.

Shubh J:

Got it. And sir, now that, in a way as you were saying that we might have hit the bottom at least in CRGO prices, what sort of margins can we have a look at, like the consolidated margins because I think H2 was almost around 7%. So, can we see an improvement there next year?

Mudit Aggarwal:

Yes, there will be an improvement. With respect to CRGO, we will see an improvement. But again, like I said, in the previous calls, I am not really sure of what improvements that could be because currently we are again in a turmoil with respect to the Middle East situation. So, right now, it seems that CRGO steel is not affected by that. But if you know there is some extra currency fluctuation that could again hit margins. So, I would be cautiously optimistic on this front. The additional

quantities that we are trying to secure within the CRGO business are on a back-to-back basis, which protects the margins.

Shubh J: Sir, I understand. But the margins for the transformer as well as the EPC would be stable, right? That can you at least tell us what will be the range?

Mudit Aggarwal: Yeah. So, margins with respect to transformers and EPC would be in the range of 8% to 10%.

Shubh J: And sir, the total sales contribution from these two would be how much approximately in FY27?

Mudit Aggarwal: It is hard to say with respect to EPC because it all depends on the new orders we get. But as of now, it seems about INR120 crores to INR130 crores with the current line of information we have. Got it.

Shubh J: Got it. Sir, just a last question in terms of...

Moderator: Requesting you to please rejoin the queue. And I request all the participants to limit the questions to two per participant. We will take next question from Pawan Kumar. Please go ahead.

Pawan Kumar: Sir, my only question was regarding the EBITDA per tonne. When I calculate that number for CRGO, this quarter comes to somewhere around INR11,000, INR12,000, which even is lower than our Q2 numbers. So what do we think are the sustainable numbers that we can do here? And if we are getting more into back-to-back contracts, as you are mentioning, what are the kind of EBITDA per tonne that we would target in this particular segment while taking the orders?

Mudit Aggarwal: So, for the back-to-back orders, we are aiming for EBITDA per tonne of about INR 20,000 per tonne. But I would like to mention here that the prices have fallen drastically, which is why the fixed cost as a percentage goes up, which is why the EBITDA per tonne decreases. On top of that, the gross margin was already decreasing because of raw material prices shifting downwards. So, we believe that -- I mean I have always guided in the past that 10% to 12% EBITDA margin is a good stable level if raw material prices or the overall market is stable. I would like to maintain that if the prices are stable. In an unstable environment, I believe this was the lowest that was there to see.

Pawan Kumar: And currently, what would the CRGO prices be around INR230, correct?

Mudit Aggarwal: You mean average realization? Sales realization?

Pawan Kumar: Average realization.

Mudit Aggarwal: Yeah, so it is around INR230.

Pawan Kumar: INR230 and we are saying we expect a 5% to 7% kind of increase going forward.

Mudit Aggarwal: Correct.

Pawan Kumar: Okay. So, Mudit, if I wanted to put a question saying, last year versus this year, how confident are you about the CRGO business entering this particular year? And also, was there any kind of inventory losses in the H2 part of it or the CRGO business because INR11,000 looks too low?

Mudit Aggarwal: So, the kind of inventory losses we faced after the end of FY25 was not there to be seen, right? Because we had a lot of inventory on the books, which we streamlined in the first half of FY26. But if the speed of raw material prices going down, comes down to let's say 15 days, in every 15 days, the raw material prices are falling. So, then each and every bit of inventory we carry will turn into inventory loss. Does that make sense?

Pawan Kumar: Yeah, I got that. And roughly we are saying in H2, the prices fell by around 15% to 20%, correct?

Mudit Aggarwal: Correct.

Pawan Kumar: Okay. That is very clear. And now, on the other part, how confident are you...

Moderator: Requesting you to please join the queue. Thank you. We'll take the next question from Siddharth Shah. Please go ahead.

Siddharth Shah: Yeah, hi, thanks for taking my question. I just wanted to understand maybe your strategy around your CRGO volume outlook. I think one of your competitors has, of course, really ramped up volumes north of 60%. But we have the capabilities to do 400 and 765, which seems to be where a lot of the new orders will come from. So, why are we just targeting 25% volume growth for this product?

- Mudit Aggarwal:** We don't see the justification of return on capital, if we go quite high on the volume growth, and there will be a substantial price war going forward. We are already seeing new players creep up in the CRGO steel segment. And we feel that a decent volume growth should justify the business and diversification from there on. We don't see the market wherein we could grow at 50% on an annual basis.
- Siddharth Shah:** Okay, got it. And just, we spoke about EBITDA per tonne, but is it possible to give for H2 the kind of, you know, cost of goods sold per tonne? Because we have the realizations from your segment analysis. But it's tough to get the cost because of now the EPC division in the consol financials.
- Mudit Aggarwal:** Just one second. I don't think it should be difficult because I think if you look at the purchase of stock in trade that is the only part that is concerned with the EPC business. So, if you just remove that, you will be able to get COGS.
- Siddharth Shah:** So, when I did that, I got about, say, INR230 as the COGS for FY26, let's just say for the full year, which seemed very high given, people were talking about CRGO in the INR185 to INR190 range.
- Mudit Aggarwal:** Just one second. So, the COGS you must have calculated would be for the whole year, right?
- Siddharth Shah:** Yeah, FY26.
- Mudit Aggarwal:** And right now, the average purchase price is around INR170, INR175.
- Siddharth Shah:** But this is coming at...
- Mudit Aggarwal:** So, you know, let me check.
- Siddharth Shah:** Sure, sure.
- Mudit Aggarwal:** Let me get back to you on that because according to my calculation, it should be around INR210 on a full year average basis.
- Siddharth Shah:** Got it. And that's only because there was a 15-20% reduction in H2. Is that the reason why our COGS are so much higher than the current market price?
- Mudit Aggarwal:** Correct. So, I'll give you a perspective. If I consider my average sale price minus COGS, that has gone down because the raw material prices

are going down. But if I consider average sale price minus average purchase price, that has pretty much remained constant if we compare it with FY25.

Siddharth Shah: Got it.

Mudit Aggarwal: Make sense?

Siddharth Shah: But that purchase price, meaning we'll see that in go forward basis, right, because that's not yet, that's in inventory.

Mudit Aggarwal: Exactly. Which is why we further reduce the inventory levels. If you see, our inventory levels have gone down drastically. The reason for that was specifically to protect margins where the raw material prices were falling, not even on a monthly basis, but on a fortnightly basis.

Siddharth Shah: Got it. No, this is very helpful. Thank you so much.

Mudit Aggarwal: Thank you.

Moderator: Thank you. Now, we'll take questions from the chat from CA Shaisav Vora. So, the first question is, what are the CapEx plans for FY26-'27?

Mudit Aggarwal: We don't have any CapEx plans. We have already installed our capacities in the last two years, in Unit 2 and Unit 3, wherein we will try to build up capacity utilization. And going forward, after we, complete the capacity utilization to the most optimum level, then we may plan for a CapEx. So at least for FY27, there are no plans.

Moderator: The second question is, what is the projected sale of IntelliCore in '26-'27? Provide little more detail about the product and company strategy going ahead.

Mudit Aggarwal: So, we are projecting about INR20 crores to INR30 crores sales in transformers and aligned components, I would say, because some of our customers require core coil assemblies, which would not be branded as IntelliCore. So, IntelliCore would be just the transformer sales to end users of transformers. That is a difficult number to put there, because we will be supplying to export customers, we will be supplying to some domestic customers. But as far as our sales strategy is concerned right now, we are seeing about INR20 crores to INR30 crores of sales.

With respect to the branding, what we have done here is, we want to express to the market, to the consumer, to the buyer, that we come with

a rich experience of handling the cores, the CRGO cores, which are the critical components of transformers, which is why we have created a brand by the name of IntelliCore.

Moderator: Sir, the third question is, provide details of the first EPC contract received in T&D. What are the projections for '26-'27 for T&D segment?

Mudit Aggarwal: So, the order book with respect to the already received orders is to the tune of INR280 crores, like I stated, out of which we have completed about INR140 crores of sales. And out of the remaining work, we will be able to achieve INR100 crores in FY27 and INR40 crores in FY28.

Moderator: Okay. We will take next question from Saumil Shah. Please go ahead.

Saumil Shah: Yeah. Hi. Am I audible?

Mudit Aggarwal: Hi, Saumil. Yes.

Saumil Shah: Yeah. Hi. So, Mudit when I am checking our volumes for last year, second half, we did about 6,900 MTPA, whereas current year second half, we did about 7,800 MTPA. So, what is the reason for that? Even our volumes have not grown. So are we seeing any demand slowdown along with the price damage?

Mudit Aggarwal: You are saying in FY25 second half, we did 6,900, right? And in H2 of FY26, we did about north of 7,500.

Saumil Shah: Around 7,000. Yes, 7,500. Yes.

Mudit Aggarwal: So, it has grown, right? On an annual basis, on a YoY basis, it has increased.

Saumil Shah: Yes, yes. It has increased by 10%, 11%. But I think our capacities have gone up so much. So, we have not seen volume increase that much.

Mudit Aggarwal: Yeah. So, Saumil, the reason primarily was again related to the raw material price decline. The problem here is that the sentiment of the market actually goes for a toss. Once the prices are declining, there is an overall negative sentiment within the market. And all the competitors are aiming for price war and trying to get rid of the higher price inventory, which leads to even further price reduction. And so, what we did was we tried to cut down on the growth while protecting margins,

which is why we did about a sizable volume, but we were not fully utilized with respect to capacity.

Also, another factor was that we were restricted by our aim to get PGCIL approval in the 765 kV class. We had actually planned to get it in the fourth quarter of the year gone by, but it actually came in April. So, now we are gearing up for those kinds of orders.

Saumil Shah: Okay. Okay. And so, basically for this year, you said the average price is about INR230 as of now?

Mudit Aggarwal: As of now on a monthly basis. Yes.

Saumil Shah: On a monthly basis. Okay. And what was this for last, I mean, last year's second half?

Mudit Aggarwal: Last year's second half. You mean FY25?

Saumil Shah: I mean, FY26, this March quarter, what was it?

Mudit Aggarwal: Yeah. So, March Q4 was around INR227.

Saumil Shah: Okay. And it is hovering around similar levels as of now?

Mudit Aggarwal: Yeah. And Q3 was around INR250.

Saumil Shah: 2-5-0.

Mudit Aggarwal: Yeah. So, between Q3 and Q4, there was a huge fall.

Saumil Shah: Okay. Understood. And now you are seeing, I mean, price revival and demand pickup. So, from here on, can we see an increase in the EBITDA per tonne?

Mudit Aggarwal: So, two components to that. We are seeing that the prices of raw material are increasing, like I previously mentioned. The demand within China seems strong and the Chinese suppliers are also not willing to reduce any further. But the second component here with respect to, like you said, demand is that the demand is structurally strong. However, because of shortages of raw material with respect to the recent inflation in prices. So for example, aluminium and copper have gone up significantly. Transformer oil has become really short in supply because of oil difficulties. Because of that, we are seeing short-term difficulties in supply chain with respect to transformer procurement at the customer

end. So, that slightly might affect volumes. But in the longer run, we don't see any problem with respect to the structural demand.

Saumil Shah: And my second question is in with respect to our EPC orders, just wanted to know more about it. So, what are we doing? I mean, so are we utilizing any of our manufacturing capacities for our EPC orders or it is just a trading business?

Mudit Aggarwal: So, it's not a trading business. It's engineering, procurement and construction wherein we do all the work back-to-back for our customer. So, currently, the work that we are doing is augmentation, revamping and installing new lines in the distribution, 11kV lines in Haryana and Punjab wherein we have to procure materials, which includes conductors, cables, transformers and light parts and we have to install them and erect them. So, currently, we are in the procurement stage and slowly and gradually, we are now moving into the erection phase. So once erection happens, the project stands completed.

Saumil Shah: Okay. So, basically, none of our manufacturing facilities will be utilized for this?

Mudit Aggarwal: In future, it will be utilized with respect to captive consumption. So, transformers will be required in these projects. We will be able to supply our own transformers. As of now, we are not able to do that because it requires end customer approvals, which we currently don't have.

Saumil Shah: Okay. That's it from my side. Thank you and all the best.

Mudit Aggarwal: Thank you.

Moderator: Thank you. I would request Bajrang Bafna to unmute and ask his question since he is unable to raise hand. Bajrang?

Moderator: We will go to the next participant. Mr. Sunil Bhansali. Please go ahead.

CS Sunil Bhansali: First, Mudit, congratulations on your good result. I am C.S. Sunil Bhansali from Chennai. I have a few questions and few suggestions. First, we are not getting monthly update. First is quarterly result. I think you are moving towards that, but till that is not happening, can we move towards the monthly update of the sales and order book? Is this possible?

Mudit Aggarwal: We can consider that. Let me discuss with our team and probably we will consider it.

CS Sunil Bhansali: Because it will help investors very greatly. Otherwise, if we get a figure in six months, it is very difficult to track the company. So, my suggestion is because wherever I was associated, generally we were doing this one. So, investors can project and can have the good feeling also and it helps the company in the long run.

Second, I just want to check, you are saying that your raw material is too much violent(volatile), prices. Since we are getting the order in advance and generally where I was working, generally we were hedging raw material with this sales order. So, because your orders are in advance, so you are procuring raw material against that. So why it is so much fluctuation in raw material in margins? I am not able to understand. Can we do some mechanism? Because I worked with all Hero Honda and all those, there we were having stable margins. Okay, little bit here, there, maybe there, but because of orders are in advance, we are not getting orders later on. First, we are getting the order. I think our order book is quite okay. So, can we not hedge the raw material along with the order? As soon as the order comes, we procure the raw material for that order. So, our margins are stable.

Mudit Aggarwal: So, our order book is generally one to two months at the max. We are, like I said, with respect to going into higher segments of 400 and 765 kV class, we are aiming to get more visibility of orders. Right now, since order books are not more than one to two months, it becomes very difficult with respect to planning. And since the environment of raw material price decrease continues on a consistent basis, then the customers also become quite prudent of that. And then they stop order commitments and they would eventually want to book orders at the lowest price possible, wherein we might carry some inventory which is at a higher price. So, it's not as simple as maybe an auto ancillary company would be, because there are a lot of grades, each and every order might be different. It is not simply that, you know, we have a contract with a customer and continue executing for a longer period of time.

CS Sunil Bhansali: I can understand that one, but you see our competitor, nearest competitor, VILAS, they are having far better margin than how they -- if they can maintain, we can at least come nearby of that. Because if you see our difference of the margins, we are having too big difference with Vilas. And you see how we can improve the margin. It is my suggestion

only, because my thing is how we can protect our margin so that in long run, we can have the better working and investor are good rewarded.

It might suggest only you work out, you are better in position, but just I'm giving suggestion because you see our competitor also, Vilas, their margins are far better than this. And this is not for one month or one quarter or it is consistently their margins are far better than us. Or otherwise they are, as for you, they are having far better technology than us or far better product than us. So, because of that, this is happening or we are par with them or we are better than them. So, we can also catch up those margins.

Mudit Aggarwal: So, I would definitely not like to comment on my competitor, but I have already said in my opening statement, the CRGO steel processing business is largely a non-differentiated nature of business. So there is no technology difference, no product differentiation as such, which could contribute to huge difference in margins. The whole industry suffered in the last one year, whoever was the purchaser of CRGO steel with respect to the processing business, as well as the steel mills who were probably competing with the Chinese steel mills. So we going forward, we take your suggestion and we will definitely look at improving our margins.

Moderator: Sure. Thank you. Bajrang has unmuted. Bajrang, you can go ahead, please.

Bajrang Bafna: Congratulations for a good set of numbers this quarter. Hope I am audible, sir.

Mudit Aggarwal: Yes, you are audible.

Bajrang Bafna: So, just to recap, probably I might have missed a couple of things in the concall. So, the volume was 7,500 tonnes in H2. So, what you said that there will be some growth in volume in FY27. And of course, I understand there are certain problems that are already there because of this West Asia crisis right now. But at least what visibility that you have right now considering the order book and the system things, what sort of volume growth you are guiding for FY27 to be precisely within some band. If you do not want to give any utilization number, you can give me some band which will help us to model in our numbers.

Mudit Aggarwal: So, based on the orders that we are in the process of securing, we believe we will be in the range of 16,000 to 18,000 tonnes. So, if you know the prices are stable or even going up, we would be aiming for north of

18,000 tonnes. If the prices are continuing to be unstable or let's say again, they take a reversal, we would be eventually ending up above 16,000 tonnes.

Bajrang Bafna: Got it, sir. And you have also given some number on EPC and transformer. I might have little bit confused. You have given INR120 crores to INR130 crores. Is it EPC or it is including transformer?

Mudit Aggarwal: So, INR100 crores of that is EPC and INR20 crores to INR30 crores we are aiming for transformer business.

Bajrang Bafna: Okay, that's too -- but sir, you are currently entering in the white labelling segment in transformer. You are manufacturing for others. So, how the transformer segment you really want to cater to people like PGCIL and all those companies or will you will keep doing the sort of job work for already existing players. So, if you could just elaborate your strategy, maybe from next 2 to 3 years perspective, because when we talk to these transformer people, they are saying for next 5, 6, 7 years, there is a humongous demand, which is existing in the system and we all are short of supply. So, if you could just elaborate on that, how do you see your positioning maybe from next 2 to 3 years perspective?

Mudit Aggarwal: So, like I said, we do not want to become our customers competition. The idea is to support them in their efforts to increase their sales and profitability, which will eventually help us in the CRGO business also. Having said that, we are also looking at increasing our sales to end consumers of transformers. That will take time, that will eventually take time. This was the fastest way of scaling up our business and making sure the return on capital is generated in the fastest possible manner.

Bajrang Bafna: Okay, so considering all those what we said right now, this INR500 crore sort of revenue is possible in FY27. That is what my broader calculation assuming to INR30 realisation for CRGO right now and assuming 17,000 volume. Will we be able to do margin somewhere between 8% to 10% in FY27, all consol put together?

Mudit Aggarwal: Your revenue number is correct. Yes, probably we will be above that. With respect to margins, yes, we are seeing those levels. Those levels are achievable. 8% to 10% is achievable.

Bajrang Bafna: Got it. And just my last question on the working capital cycle. On a consol basis, like different segments have got different working capital cycles. So, if you could just guide us, you know, how do you see the

funding of working capital, whether you will be tilting more towards debt or probably how you are going to fund that working capital?

Mudit Aggarwal: So, we have, currently, we have been able to reduce the working capital requirement in CRGO and use that to fund our EPC business and some support from the vendors in the EPC business as well. Going forward, if we are only executing the existing orders, we don't need additional working capitals, probably the figures will even improve from there on. If we are able to secure more orders, we will be funding it through debt.

Bajrang Bafna: Okay. And net working capital cycle will be better than what we are having right now. Correct?

Mudit Aggarwal: Expect it to be in the same range.

Bajrang Bafna: Okay. Got it, sir. Thank you and all the very best, sir.

Mudit Aggarwal: Thank you so much.

Moderator: Thank you, Bajrang. We will take a few questions from the chat. One is from Mr. Nitin Batra. Are the land and building for all three units owned by the entity or are the units on lease?

Mudit Aggarwal: So, unit 1 is owned by the company and unit 2 and unit 3 are long-term leases.

Moderator: There is a question from Aditya Bhutra. What is the capacity utilization for manufacturing in FY26 and how much do you expect in FY27?

Mudit Aggarwal: So, capacity utilization comes out to be about 65%. However, some part of the capacity enhancement took place in the middle of the year. So, on a full year basis, it comes out to be about 65% and that is pretty much the number that currently holds true with respect to monthly utilization. Sorry, Vinay, what was the second question?

Moderator: That was it. And for FY27, what will be the capacity utilization?

Mudit Aggarwal: So, like I said, we have a scope of going up to 20,000, 21,000 tonnes if we consider everything as ideal. But the aim in this financial year would be to protect margins and we will be selective in order booking. So which is why I said we are aiming for conservatively 16,000 to 18,000 metric tonnes of volume in FY27.

- Moderator:** There is a question from Deepak Gugnani. What is your vision for FY28 '29? Do we have any internal target or guidance for scale or market share or products? And by when should we look at getting on the main board?
- Mudit Aggarwal:** The long-term vision again remains that we want to become an integrated power player wherein we do EPC projects. We see a lot of scalability there as well as profitability. However, it is a working capital intensive business. So, we have to take a calibrated approach. The manufacturing part will eventually be used also to successfully increase margins in the EPC business. So we see synergies in all three businesses put together. Which is where we want to take the business forward. If we are able to see demand coming through in the next 2, 3 years, we will be going for a full-blown CapEx with respect to further enhancing the capacities.
- Moderator:** There is a question from Gautam Karmarkar. Do client contracts have price fluctuation pass-through clauses? And what is the industry strength for this product category that is CRGO course?
- Mudit Aggarwal:** The orders that we generally have do not have a pass-through mechanism. We generally get orders on a spot basis in the span of 1, 2 months. However, the orders that we are discussing with our new customers would have some pass-through mechanism and would entail protection of margin while it may not be a high margin, but there would be protection of margins.
- Moderator:** Sure. We will take next questions from participants who have not had a chance to ask a question. We will first take it from Nishita. Nishita, you can go ahead and ask your question.
- Nishita Shanklesha:** Yes. Hello. Am I audible?
- Mudit Aggarwal:** Yes.
- Nishita Shanklesha:** Yeah. So, I just wanted a clarification. You mentioned that right now the average purchase price for CRGO is INR170 to INR175 and then you also mentioned that it is at INR230. So, I just wanted a clarification. The current price is at INR230, right?
- Mudit Aggarwal:** Correct. Average sale price.
- Nishita Shanklesha:** Okay. And the 5% to 7% price hike excluding the rupee depreciation, we can see happening, right?

- Mudit Aggarwal:** Correct.
- Nishita Shanklesha:** Okay. Understood. And also a clarification on EBITDA margin. So, in CRGO, we have EBITDA margin of 10% to 12% which will be sustainable for FY27 as well.
- Mudit Aggarwal:** See, the volatility in the past three periods has been so detrimental to the business, we don't want to guide on an EBITDA margin level. In the previous call as well, we never guided on the EBITDA margin level. We just want to give you -- we basically want to give the investors a real picture, a true picture of what is happening in the industry and hopefully, be able to ride through the storm and get through better margins. We are confident of going back to those levels of margins if the prices go up as well as, there is some form of stability in the market. So, if let us have at least one more period wherein the stability remains, once that is there, we will be able to confidently guide on the margins.
- Nishita Shanklesha:** Okay. Okay. Understood. But like just to understand, if things are stable, then 10% to 12% margin is what we can see?
- Mudit Aggarwal:** Absolutely.
- Nishita Shanklesha:** Okay. Okay. And in EPC also, the margin is around 10% to 12% or it is lesser?
- Mudit Aggarwal:** So, we are currently aiming for 8% to 10%. Right now, if you notice the books, it was hovering around 12%. But just to be on a conservative side, we think that 8% to 10% level in the existing orders is sustainable. With respect to new orders, there will be an improvement of margins.
- Nishita Shanklesha:** Okay. Okay. Understood. Thank you so much.
- Mudit Aggarwal:** Thank you.
- Moderator:** Thank you. Since we have hard stop at 1 pm, requesting all the participants to restrict to one question. So, we will take next question from Prashant Somani. Please go ahead.
- Prashant Somani:** Good afternoon, sir. My question was regarding the EPC business only. What kind of order pipeline do we have for coming years? New orders which we are expecting are bidding for that. And what kind of capabilities we have built for this which helps us in competing with the

larger players? Because what I know is the current execution is mostly outsourced to the other vendors.

Mudit Aggarwal: Which is one of us. I mean, the execution was outsourced to us, right? Because these orders that we got were subcontracted to us. Right now, we don't have visibility on the order book. But we will eventually be going for some sort of business development in this space and hoping that we will be able to secure some orders in this financial year. Like I said earlier that we have a bandwidth to handle orders of about INR500 crores with respect to both working capital as well as the team size that we have. But it will obviously depend on the kind of margins that it entails and the risks involved in it.

Moderator: Thank you. We will take next question from Sarthak Gupta. Please go ahead.

Moderator: We will move on to Aarush Marwaha. Please go ahead.

Aarush Marwaha: Hello. Hello.

Mudit Aggarwal: Yes, you are audible.

Aarush Marwaha: Yeah. What will be the future product mix in terms of revenue from all the segments combined?

Mudit Aggarwal: So, what we are aiming for is 50% of our revenue coming from EPC. That will be the ideal situation. However, at this point of time, it is difficult to give a number because we don't have specific orders in hand.

Aarush Marwaha: Okay. And won't the EPC affect the cash flows and how will you mitigate that?

Mudit Aggarwal: Yeah. So, EPC will eventually be a working capital intensive business. We will be selective of the orders that we take and our team is, I mean, we have confidence in our team to make sure that the receivables are received on time.

Aarush Marwaha: Okay, fine. And one last question. What is the guidance on each vertical, if I may ask?

Mudit Aggarwal: Are you specifically asking for FY27?

Aarush Marwaha: Yeah.

Mudit Aggarwal: So, FY27, the increase in volumes will come through in CRGO as long as the margins are protected because our focus will be on margin protection. So we are not seeing a substantial increase but we will try to achieve the existing growth rate. On the EPC front, we will continue to do about INR100 crores of business with respect to the current order book and hopefully bid for new orders.

With respect to transformers, we are aiming to do a sales of about INR20 crores to INR30 crores.

Moderator: Thank you. We'll take the next question from Sanjay K. Sanjay, you can go ahead and ask a question, please.

Sanjay K: Hello, am I audible?

Moderator: Yes.

Mudit Aggarwal: Yes, you are audible.

Sanjay K: Hey, what is the execution and collection cycle for the EPC that you are projecting for the year?

Mudit Aggarwal: So, mostly the payment terms in the current orders, especially with respect to the RDSS orders that we have, is 60% of the material cost is, 60% of the billing is realized upon delivery and the remaining 40% is executed or say realized at the time of erection of the feeder lines. So, the 40% that remains will eventually be realized once erection goes through.

Moderator: We'll take the next follow-up from Shubh. Shubh, you can go ahead, please.

Shubh J: Sir, so I just have one question like as a long-term shareholder, what I would want to understand is that where do we see Jay Bee in next three years? I mean, what I've seen in last one year is that we have diversified into two more verticals. We were doing CRGO and now I think you also mentioned that we are intentionally not increasing the utilization because the ROC doesn't make sense at some point, right?

So, where do we see Jay Bee in next three years and how do we see the growth, overall growth, right? At least in next three years, like is there any aspiration to reach INR2,000 crores or some sort of revenue or

anything that you can give us and tell us what is it that Jay Bee is going to be specialized in at some point of time?

Mudit Aggarwal: It will be a mix of both manufacturing and services. When I say services, it means projects. The vision, like I said earlier, is to become larger with respect to scale. We want to hit the INR1,000 crore mark as early as possible. We have some internal projections, but it will be difficult for us to comment on that right now, considering that we are recovering from a bad cycle in the CRGO space. So I would suggest we -- I mean, give us some time to build on the capabilities in the new divisions that we have created.

Let us prove that we are able to execute those divisions effectively with respect to return on capital and you will eventually see that we are scaling up nicely in all three segments.

Moderator: Since that was the last question for the day and we need to close the concall, Mudit, would you like to give any closing comments?

Mudit Aggarwal: Yeah, I just want to say, I mean, I would like to thank our long-term shareholders who have been extremely patient and trusting in us. We have had our ups and downs, but eventually in the long run, we want to build a business which is sustainable and organic in the growth of sales as well as profits. So, thank you everyone. Thank you for joining this call and again, lots of thanks to the long-term shareholders who are with us through thick and thin.

Moderator: Thank you. Thank you to the management team for your valuable time and thank you to all the participants for joining on the call. This brings us to the end of today's conference call. You may all disconnect now. Thank you.
